PROFILE

DevOps engineer and people leader with 7 years of progressive experience in cloud and hybrid infrastructure, currently focused on infrastructure automation and pipeline-driven deployments across critical national infrastructure at scale. Specialises in converting manual, high-risk operational processes into repeatable, auditable automated workflows using Ansible, Bicep, and Azure DevOps. Leads a team of 8 engineers while serving as the senior customer escalation point, combining hands-on technical delivery with stakeholder management and operational leadership. Proven ability to drive measurable cost efficiency and team performance improvement in large, regulated environments.

CORE SKILLS

Ansible

Azure / Azure Local

AWS

FinOps

Hyper-V

Windows Server

GitHub Enterprise

PowerShell

Bicep / ARM Templates

Azure DevOps Pipelines

HashiCorp Vault

Enterprise Networking

Cisco / HPE

MPLS / SD-WAN

VPN Management

Linux / RHEL

Containers / Podman

EXPERIENCE

Microland Limited - DevOps Engineer

April 2024 – Present | Birmingham, United Kingdom

- Driving infrastructure modernisation using **Ansible**, **Azure DevOps pipelines**, and **GitHub Enterprise** to automate deployments across the estate.
- Automated deployments across **Azure Local** and **AWS** hybrid infrastructure for critical national infrastructure at 75+ physical sites.

- Migrated legacy manual deployment processes to automated **Azure DevOps** pipelines and **Ansible** playbooks, improving deployment consistency and eliminating manual error risk.
- Designed and delivered automated workflows for new service onboarding, eliminating repetitive manual tasks and freeing the team to focus on higher-value work.
- Developed and maintained **PowerShell** scripts for automation and configuration management across the estate.
- Enforced IaC standards using **Ansible** and **Bicep**, implementing automated compliance and security configuration enforcement across the estate.
- Led the migration of 68+ **IPSec VPNs**, maintaining network continuity and security throughout delivery.
- Led **AWS cost optimisation** initiative, reducing annual cloud spend from over **£1M to approximately £850K** through infrastructure right-sizing via **Ansible Infrastructure as Code** and resource rationalisation.
- Continued people leadership responsibilities post-promotion, managing a team grown to **8 engineers** across workload planning, technical development, and day-to-day delivery.
- Serves as the **senior technical escalation point** for the customer, owning high-priority incident response and maintaining strong stakeholder relationships at account level.

Microland Limited - Senior Cloud & Infrastructure Engineer

March 2022 – April 2024 | Birmingham, United Kingdom

- Managed **Microsoft Hyper-V** hybrid environments across multiple remote sites connected via **MPLS** to AWS.
- Provided full-stack operational support across **Windows Server**, cloud, WAN, embedded electronics, **Cisco** and **HPE** networking, and infrastructure services.
- Owned patch maintenance and security update processes for 68+ critical national infrastructure sites, managing the full update lifecycle.
- Managed and mentored a **team of 5**, coordinating workload distribution, technical priorities, and operational delivery across a multi-site critical infrastructure function.
- Acted as functional lead in the absence of senior management, representing the team in **client and stakeholder meetings** and maintaining full operational accountability.
- Supported migration to **SD-WAN** while maintaining service continuity, security, and network performance.
- Delivered customer-focused service management, maintaining high service standards and acting as the primary escalation point for service quality.

Microland Limited - SME Cloud & Datacentre

September 2018 – March 2022 | Birmingham, United Kingdom

- Operated as part of a specialist infrastructure team, resolving complex, high-priority incidents across critical national infrastructure with strict SLA and change control requirements.
- Delivered operational support across **Hyper-V**, **Windows Server**, cloud, WAN, **Cisco** and **HPE** networking, and embedded systems.
- Supported **SD-WAN** migration while maintaining service continuity and security across connected sites.
- Built strong **ITIL** foundations through structured incident, problem, and change management processes.
- Acted as technical escalation point for complex infrastructure and networking incidents across the team.
